

Robertson Geologging is focussed on delivering high quality services and equipment, with geophysical logging tools developed in-house over several decades. We have a proven track record of safely delivering subsurface logging investigations in demanding environments, and can offer experienced personnel, mature technologies, supported by our own in-house engineering, manufacturing and R&D resources.

Slimline Openhole Oil & Gas - Unconventional Resources  
Coal Bed Methane - Coal & Mineral Exploration - Mining  
Earthquake Engineering - Geotechnical Studies  
Windfarms & Offshore Structures - Geological Surveys  
Groundwater Studies - Environmental Monitoring and more
